

TM250HD

HD encoder
DVB-T/DVB-C/IP out

Congratulations on your purchase of the TM250HD !

This 'state of the art' product, is a HD encoder. The video input can be taken from HDMI, PC or Component Video. The audio can be taken from HDMI or analog audio.

After compressing the video into H264 and audio in AAC, the output can be configured as DVB-T, DVB-C modulator or as IP streamer.

Stand-alone configuration is made easy through 4 tact switches and ergonomic menu's. To make the configuration of the TM250HD ultra simple, a special software TMHDIface is available that you can download on our website anttron.com

1 - Safety considerations

1.1 CONNECTING TO THE MAINS SUPPLY

This product has to be connected to the mains supply. If there is the slightest doubt concerning the type of connection available on the installation, please contact your supplier of electricity. Before carrying out maintenance operation or modification of the installation, the modulator has to be disconnected. Remark : only use the supplied power adaptor.

1.2 OVERVOLTAGE

An overvoltage on the mains supply, can cause shortcircuits or fire. Never overload the power lines.

1.3 LIQUIDS

This module should be protected from splashes. Please assure yourself that no containers containing liquids are placed on this module. Also be aware of other persons splashing liquids on the module.

1.4 CLEANING

Disconnect the module before cleaning. Use only a humid cloth without solvent.

-

1.5 VENTILATION

In order to assure an adequate air circulation and to prevent overheating, the ventilation holes should not be obstructed. The module may not be installed in a hermetically sealed environment. Other electronic products or heat producing items may not be placed upon or near the module.

1.6 ACCESSORIES

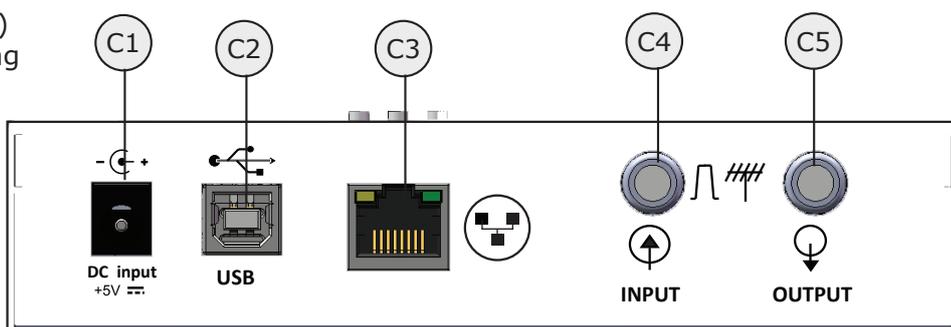

The use of accessories not manufactured by the manufacturer can cause damage to the module.

1.7 INSTALLATION OF THE MODULE

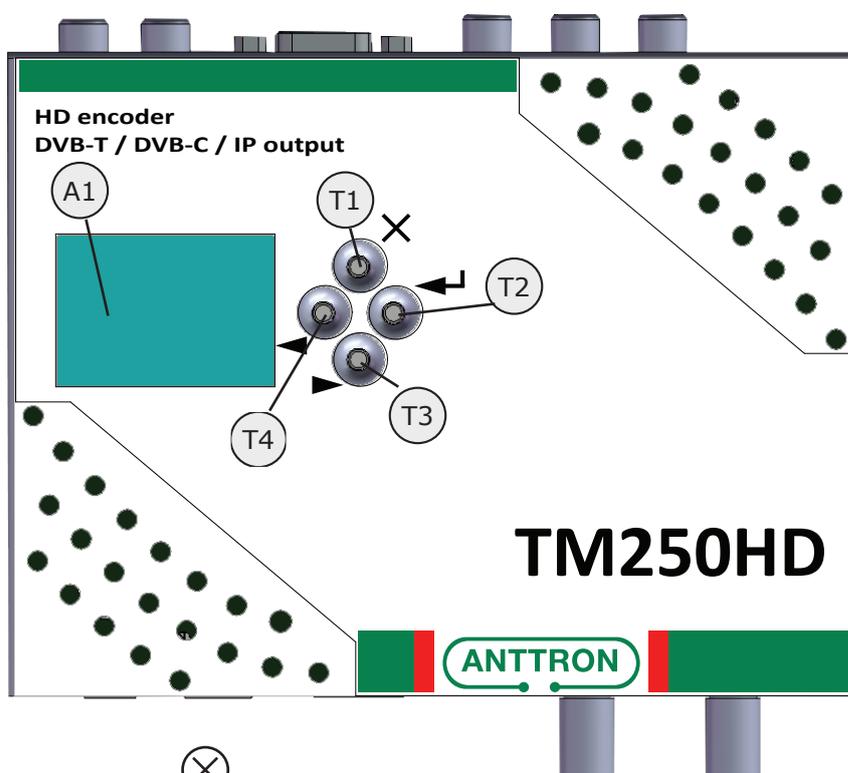

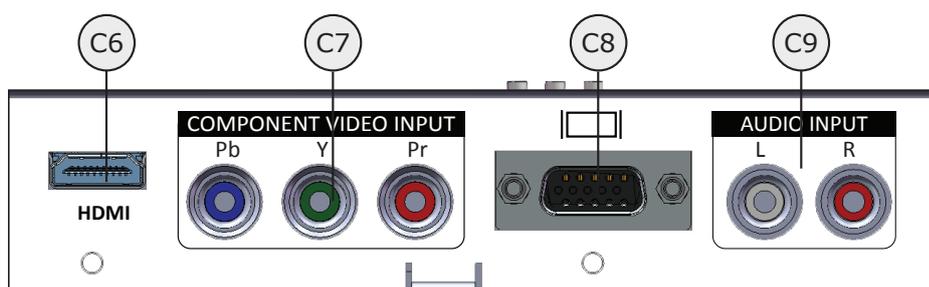

The module must be installed in a place well protected from direct sunlight. All measures have to be taken to avoid installation in humid or sunny place. Do not install near heating elements or other devices producing heat. Assure yourself that the module is placed at least 10 cm from other equipment with is susceptible to electromagnetic radiation. Do not install the module on instable items. A fall can cause physical or material damage.

2 - Description of the different elements

- C1** Power supply input (5V/4A)
- C2** USB input (for programming the TM250HD by PC)
- C3** Ethernet connection RJ45
- C4** RF input
- C5** RF output

- C6** HDMI input
- C7** Component video input
- C8** PC input
- C9** Analog audio input

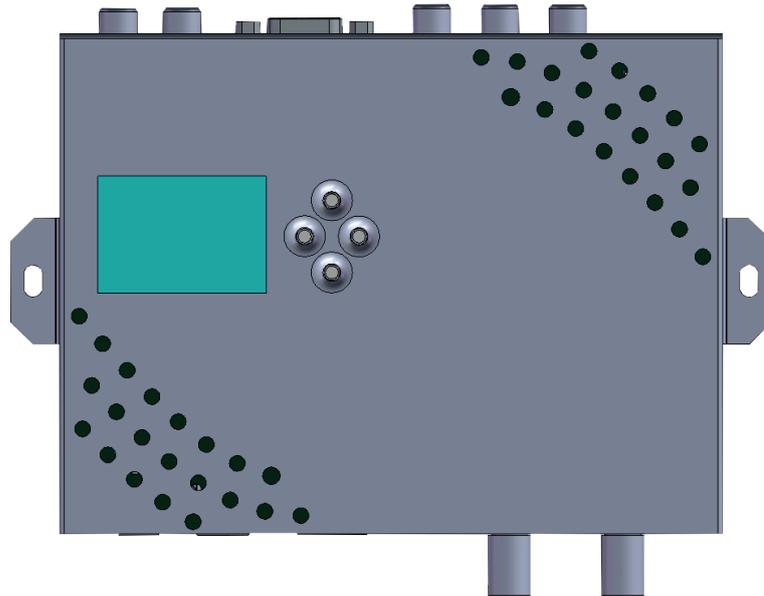

- A1** Display
- T1** **CANCEL/RETURN** button
- T2** **ENTER** button
- T3** ► (move forward/down) button
- T4** ◀ (move backward/up) button

3 - Installation and menu structure

3.1 - Installation

Install the TM250HD against a wall using the wall fixation brackets to ensure cooling of the housing through natural convection. (see drawing)

Connect the audio and video source using HDMI, PC, or component VIDEO and ANALOG audio cables. Connect the RF input cable (if present) and the RF output cable. If the RF input is not used, please connect a 75 ohm terminating resistor to it. Once the modulator installed and the cables connected, please proceed connecting the power supply to the modulator.

3.2 - Powering up

Plug in the connector of the power supply. The display will show the ANTTRON logo while booting. Once the modulator has booted correctly the main menu will appear.

In the first line the model number is displayed (TM250HD) followed by the installed firmware version.

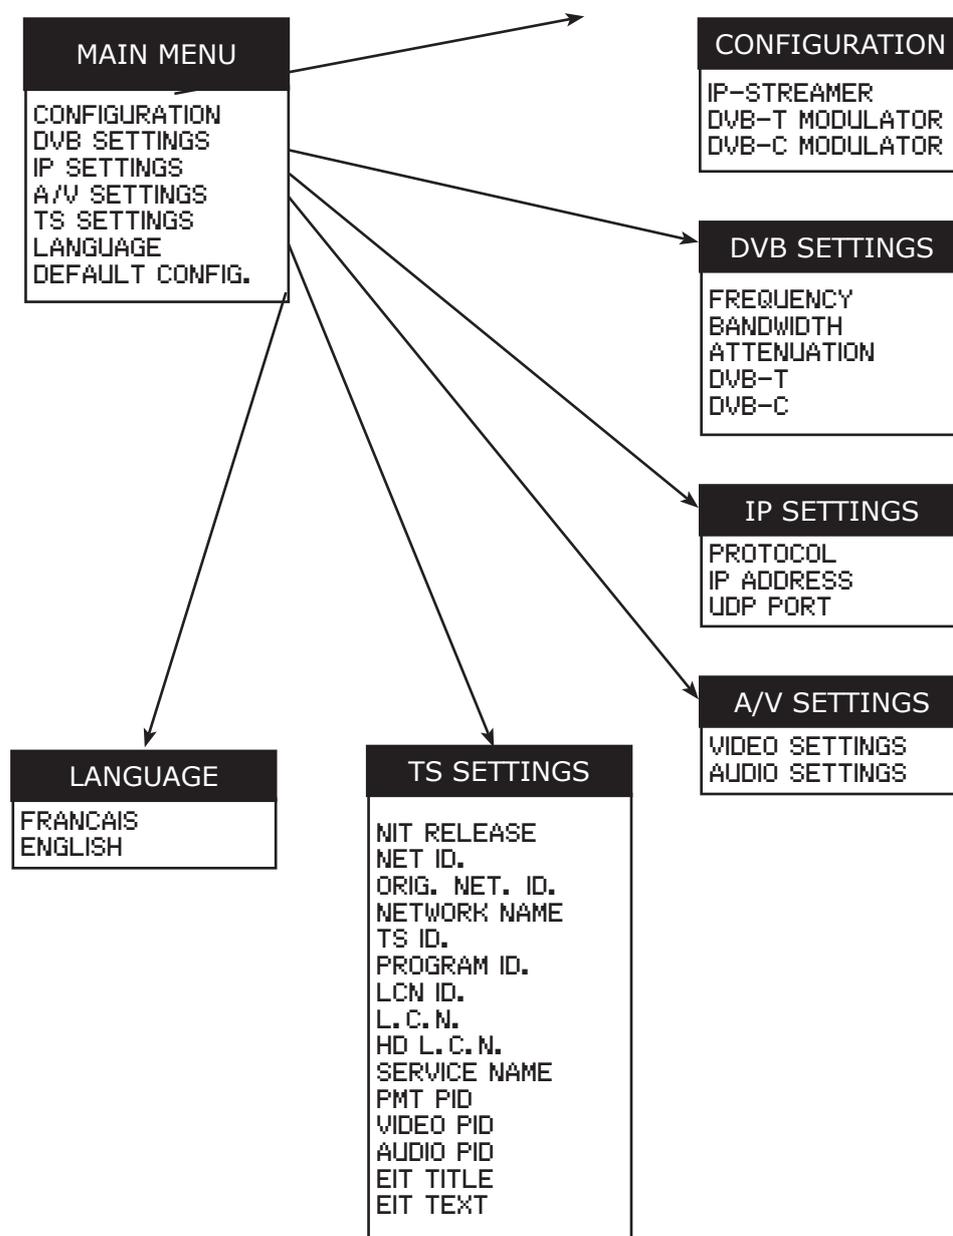

When the modulator is encoding, the actual resolution is displayed in the bottom line of the display. When the modulator is initialising, the mention INIT is displayed at the bottom line.

```

TM250HD 4.0
CONFIGURATION
DVB SETTINGS
A/V SETTINGS
TS SETTINGS
1280x720-50fps
    
```

3.3 - Menu structure

The TM250HD has different menus allowing easy access to the different parameters and to change them when necessary. Below you will find the structure of the different menus.

In order to go from one menu to the other use the MOVE **UP/DOWN** keys to select the menu option. Press the **ENTER** button to select this option. Press the **CANCEL** button to go back to the previous menu.

To set parameters, whether you have the option to select a specific value. In the other case some number or text string should be entered. In that case, use the buttons ► and ◀ to move to the desired character and press the ENTER button to confirm. Please note the following **SPECIAL CHARACTERS** :

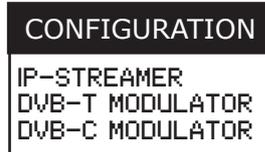

↵ confirm the modified value / * erase all / ← backspace

↔ move cursor back or forward

4 - Setting up the TM250HD

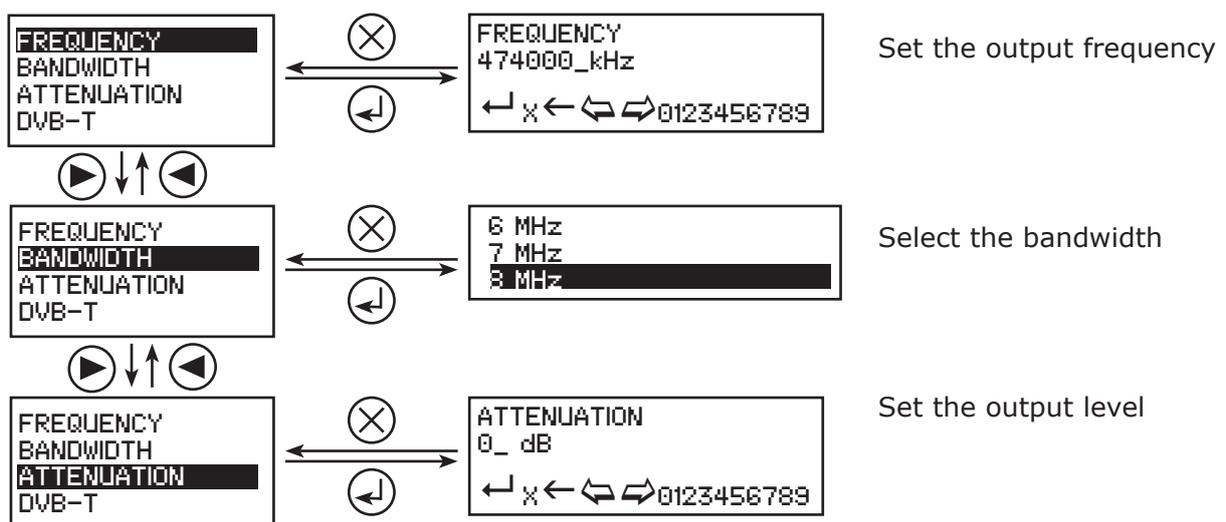

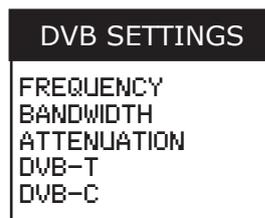

4.1 - The CONFIGURATION menu

In this menu you can setup your TM250HD as IP streamer, DVBT modulator or DVBC modulator. Select the appropriate option with the buttons ► and ◀ and press the ENTER button to confirm.

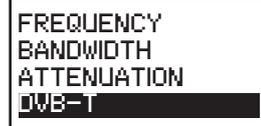

4.2 - The DVB settings menu

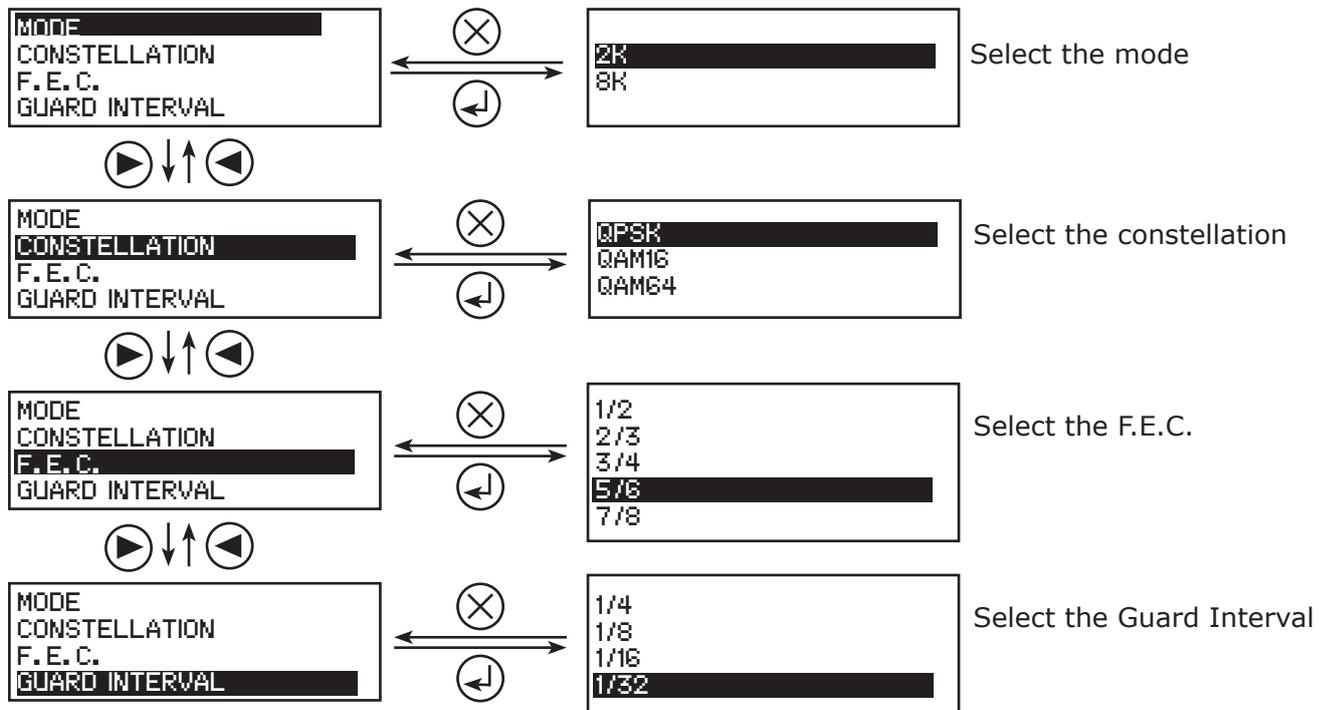

If the TM250HD is configured as DVBT modulator or DVBC modulator, you can set in this menu the output frequency, bandwidth, output level and specific parameters for DVB-T or DVB-C.

4.2.1 - Setting DVB-T parameters

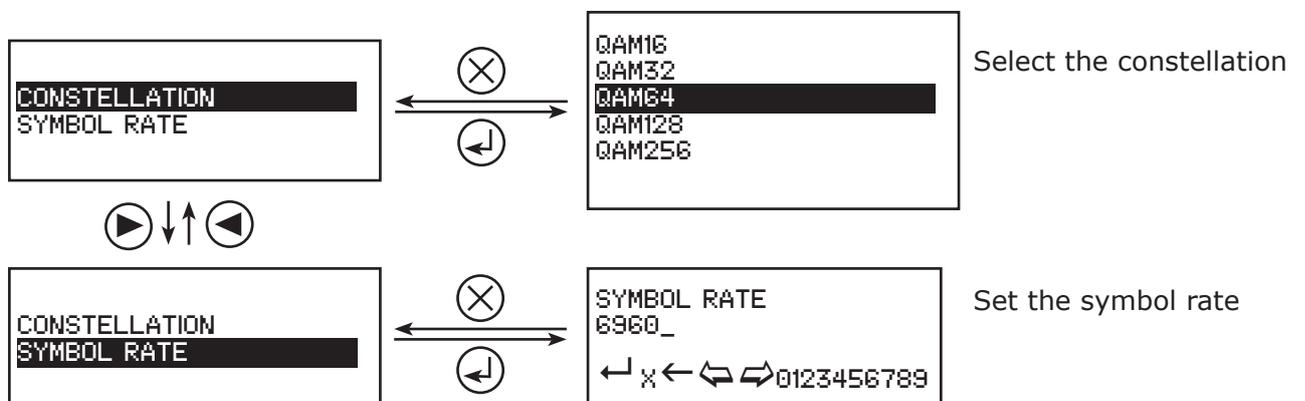

When you select DVB-T and press the ENTER button, the following submenu appears. It allows you to set the DVB-T parameters.

4.2.2 - Setting DVB-C parameters

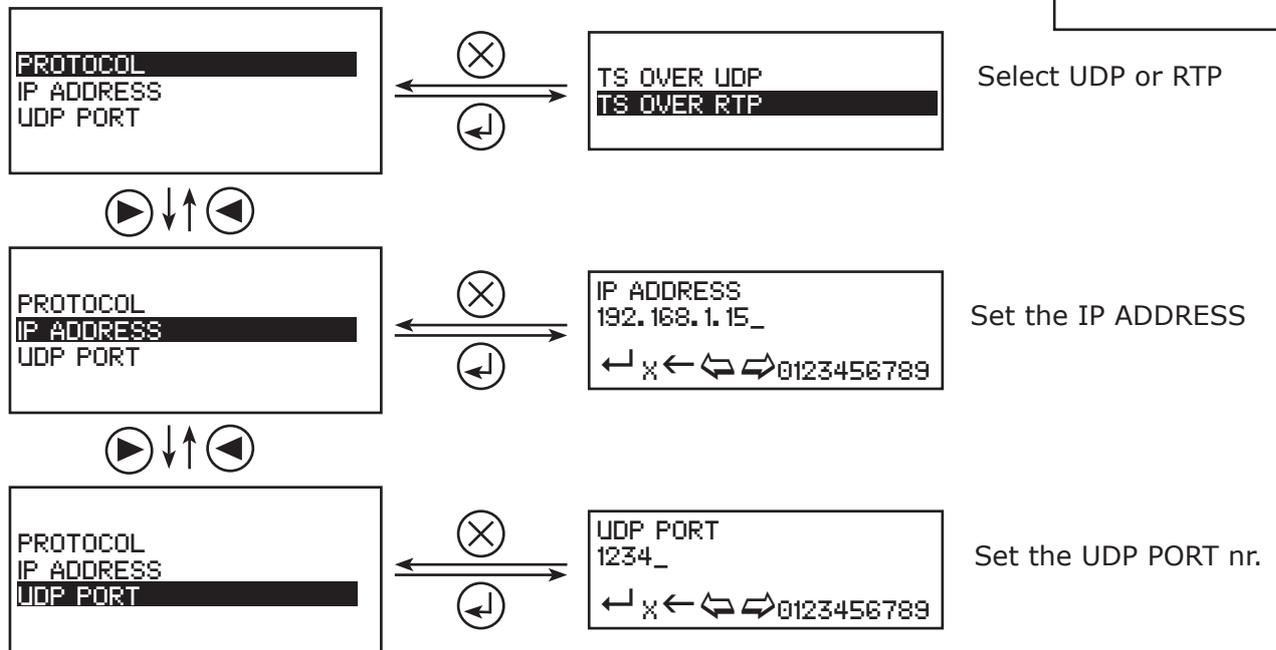

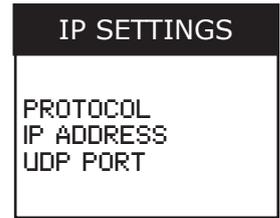

When you select DVB-C and press the ENTER button, the following submenu appears. It allows you to set the DVB-C parameters.

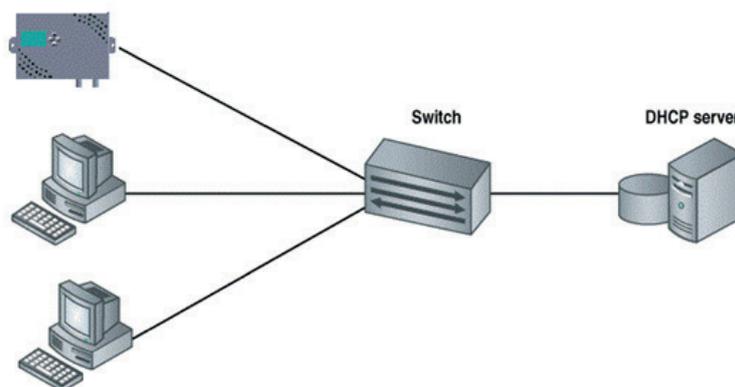

4.3 - The IP settings menu

When your TM250HD is configured as IP streamer, the you can adjust the settings in the IP settings menu.

TM250HD – IP Streaming

1) Self IP configuration

The TM250HD dynamically obtains its IP address on startup from a DHCP server. For this reason, ensure that it is connected to a router or something else running a DHCP server (like on the figure above) before powering it on. This way network address of the TM250HD, network mask and network gateway are automatically got from the DHCP server.

2) Destination IP configuration

Once you've set the TM250HD in the IP streamer mode, you have to specify the IP address of the destination you want to see the program on (using VLC on a PC for example).

For this, run TMHDIface and correctly set the boxes **1**, **2**, **3** below :

The screenshot shows the TMHDIface configuration window. The 'IP' radio button is selected. The 'Level Att.' slider is set to 0dB. The 'Address' field contains '192.168.1.11' and the 'Port' field contains '1234'. Red circles 1, 2, and 3 are placed over the 'UDP' dropdown, the 'Address' field, and the 'Port' field respectively.

- 1** Select the protocol you want to use to encapsulate the DVB stream knowing that UDP takes less bandwidth than RTP and although it is not connection oriented, it is still particularly useful for streaming.
- 2** Enter the IP address of the destination PC or device. This address can be an unicast address (the address of a single PC : 192.168.1.11 for example), or a multicast address (a logical identifier for a group of destination devices in a network). In this last case, the multicast address range should be between 224.0.1.0 to 238.255.255.255 because range 224.0.0.0 through 224.0.0.255 is reserved for local purposes and range 239.0.0.0 through 239.255.255.255 is reserved for administrative scoping. When using multicast address, ensure that a capable IGMP router is used.
- 3** Select UDP port on which the stream will be carried. In case RTP over UDP protocol was selected, use an even number for this port.

3) Program viewing

Once all have been set, the program should be available to be seen on any VLC like client.

For VLC mediaplayer (<http://www.videolan.org/vlc/>), just open a network stream using the URL `udp://@192.168.1.11:1234` replacing :

- . `udp` by `rtp` if you have chosen the RTP protocol in **1**,
- . `192.168.1.11` with the address you set in **2**,
- . `1234` with the port number you set in **3**.

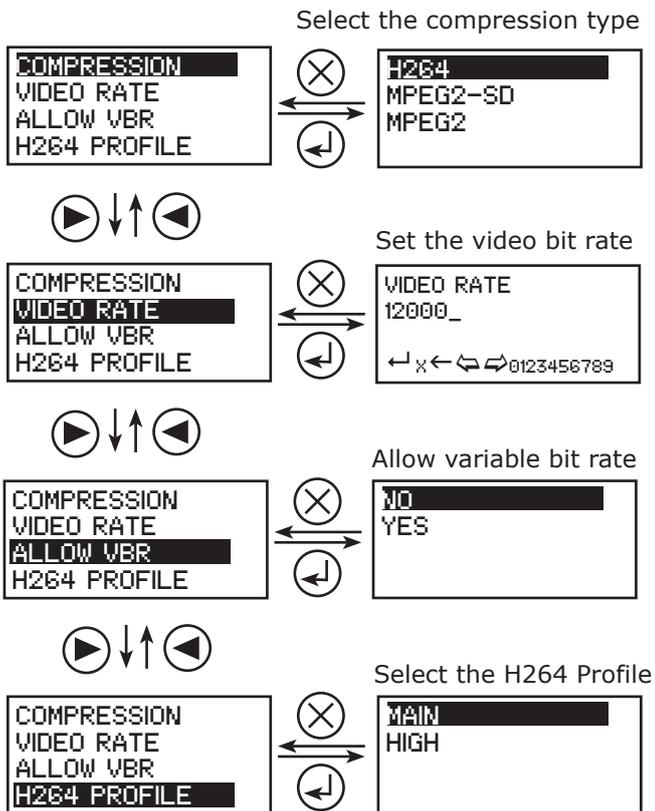

4.4 - The AV settings menu

In the A/V settings menu, you can set specific parameters for video and audio.

VIDEO SETTINGS
AUDIO SETTINGS

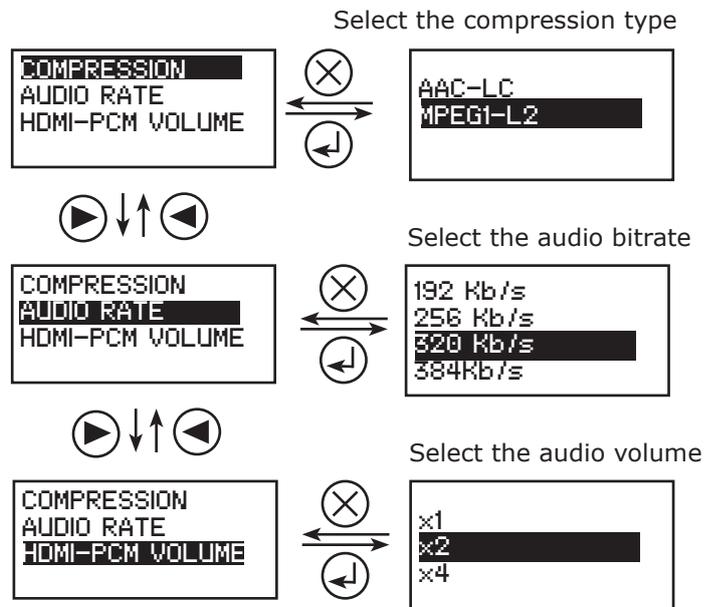

4.4.1 - Video settings

When you select VIDEO SETTINGS and press the ENTER button, the following submenu appears. It allows you to set the VIDEO parameters.

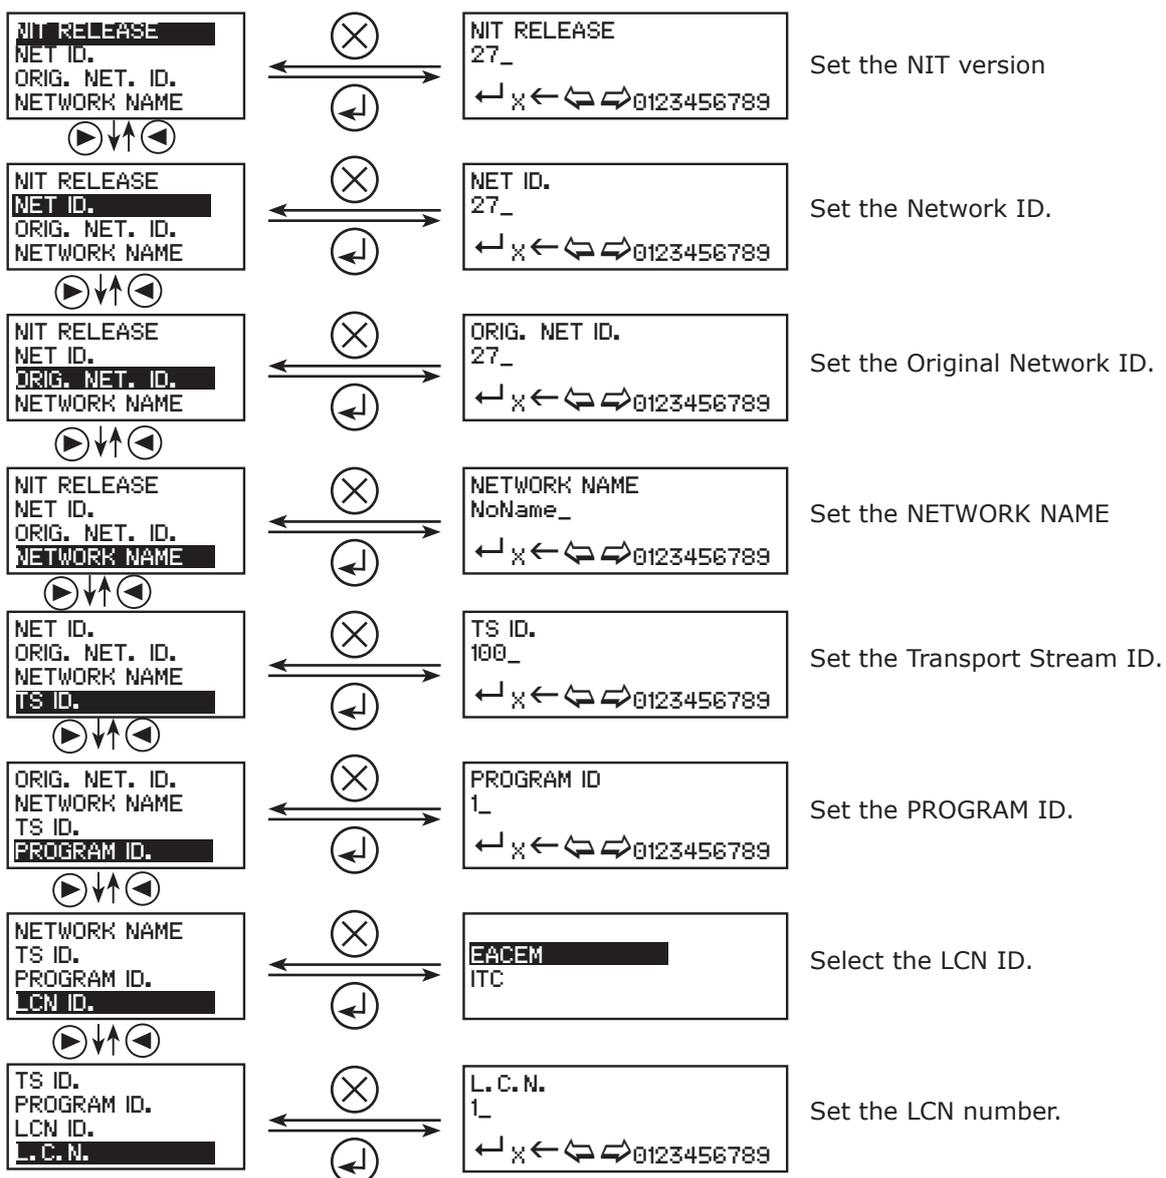

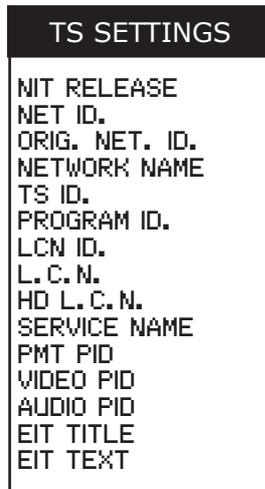

4.4.2 - Audio settings

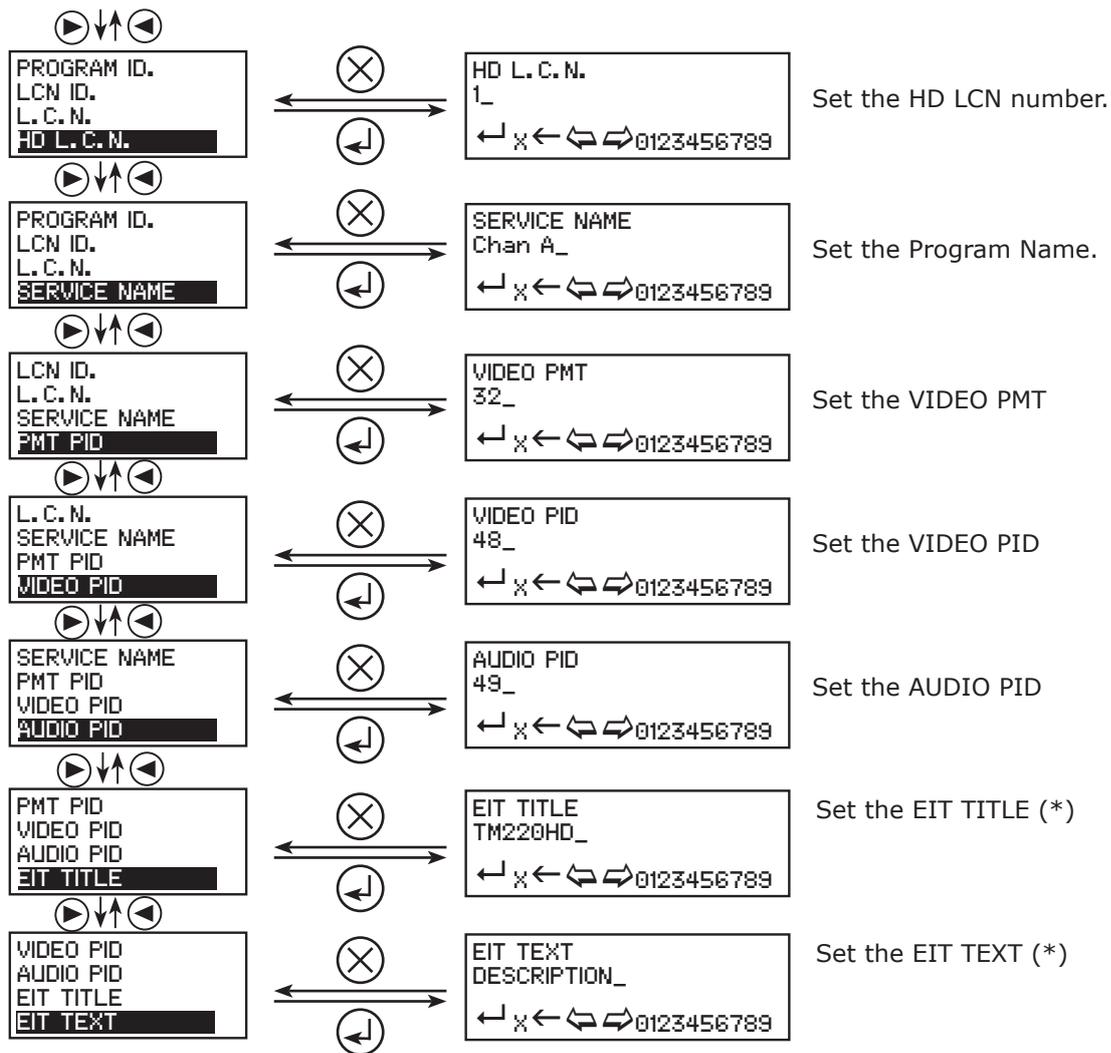

When you select AUDIO SETTINGS and press the ENTER button, the following submenu appears. It allows you to set the AUDIO parameters.

4.5 - The TS settings menu

This menu allows you to adjust specific parameters of the transport stream.

(*) EIT title and text will pop up on your television screen when pressing the INFO button on the handset of your TV, when watching the program coming from the TM250HD modulator.

4.6- The language menu

Select in this menu your preferential language.

4.7 - Default configuration

When selecting this option, all your modifications will be lost, and the default factory settings will be restored.

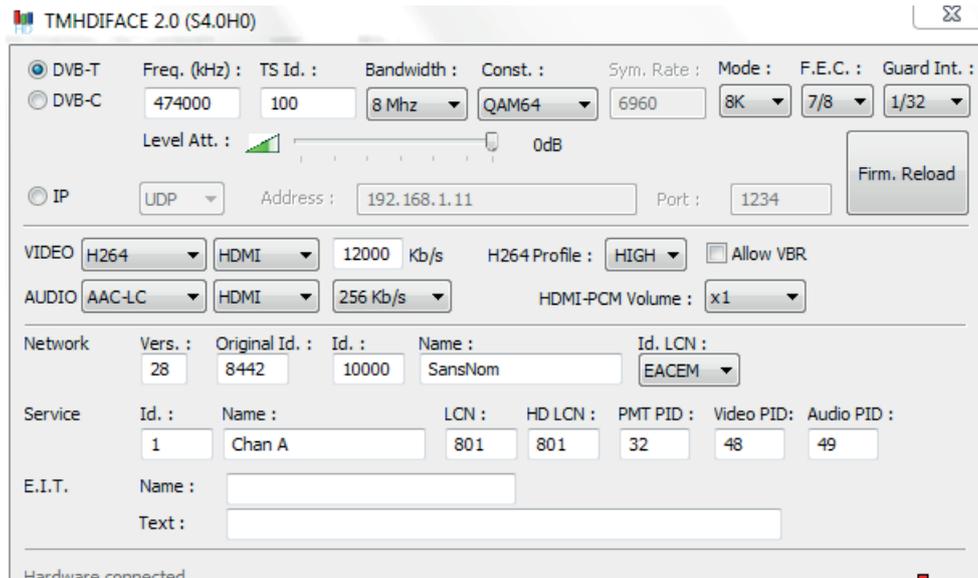

5 - Programming using a PC

The settings of the TM250HD can also be changed using a PC.

First, please install the software **TMHDIface** on your PC. You can download this software from our internet site **anttron.com**

After installation of this software, connect the TM250HD using a USB cable (not included) to your personal computer. Then launch the program **TMHDIface**.

On the display of the TM250HD the message <USB> appears, indicating that the programming is now performed through your PC. The following window appears on your screen.

Now, all parameters discussed in Chapter 4 of this user manual can be modified by TMHDIface.

6 - Technical specifications

Video inputs	Input	HDMI - YUV - Computer analog input
	Resolution modes	480p -576p -720p - 1080i - VGA - SVGA - XGA - SXGA
	Compression	H.264 / MPEG2-SD /MPEG-2 – bitrate 5-15 Mb/s
Audio inputs	Input	HDMI – L/R analog audio input
	Sample Rate	HDMI (32kHz / 44.1 kHz / 48 kHz) – Analog (48 kHz)
	Compression	AAC-LC /MPEG1-L2 – bitrate 128-384 Kb/s
